**REMARKS**

Applicants have amended the specification as described herein to correspond to the continuing data as correctly recited in the filing receipt properly claim benefit to an earlier filed, co-pending, nonprovisional patent application which was filed prior to November 29, 2000. Applicants submit that this case is now believed to be in condition for allowance and such allowance is earnestly solicited.

Pursuant to 37 CFR § 1.21, attached as Appendix A is a Version With Markings to Show Changes Made.

Respectfully submitted,

Date: June 13, 2003

**Appendix A****Version With Markings to Show Changes Made**

In reference to the amendment made herein to specification, additions appear as underlined text, while deletions appear as bracketed text, as indicated below:

**In The Specification:**

The paragraph on page 1, line 6-13 has been amended as follows:

This application is a divisional of U.S. Patent Application Serial No. 09/074,455, filed May 7, 1998, now U.S. Patent No. 6,135,117, which claims the benefit of U.S. Provisional Application No. 60/046,188 filed May 12, 1997 and U.S. Provisional Application No. 60/072,121 filed January 22, 1998. This invention was made with Government support under Grant No(s). R01MH45067 and K02MH01099, awarded by the National Institute of Health. The Government has certain rights in the inventions. This invention relates to a method for resetting the phase of the human circadian clock and for enhancing alertness and performance in humans by application of non-solar photic stimulation, in the range of 15 to 150,000 lux, to any non-ocular region of the human body.
